@LeoDabus I was referring to the names of the days of the week. But apparently I solved as the days of the week are automatically translated and positioned correctly (Monday to Sunday and not Sunday to Saturday) when using Locale (identifier: "it") when using DateFormatter – kAiN Oct 7, 2021 at 23:55

Create a custom Gregorian calendar and set the first weekday to Monday

```
var customCalendar = Calendar(identifier: .gregorian)
customCalendar.firstWeekday = 2
```

this is great. Do you know if there is a calendar API to check the preferred start of week for a given locale? Some regions use Monday some use Sunday as the start of the week. – Xaxxus Feb 2 at 22:33

Create a list and alternate the numbers of the week:

```
return [0,7,1,2,3,4,5,6][Calendar.current.component(.weekday, from: Date())]
// Monday -> 1
// ...
// Sunday -> 7
```
