Came across this question as I'm about to embark on something similar, guessing maybe already cracked, but for the benefit of others less fortunate :-)

So currently it turns out to make this work with macOS v12 (Monterey) Beta 6 and Xcode 13 Beta 5 it's necessary to specifically set the FocusState for the next "app state" **outside** of the current "app state"'s UI update cycle e.g.

```
import SwiftUI

struct ContentView: View {
    @State var fields: [String] = [""]

    @FocusState private var focusField: Int?

    var body: some View {
        List {
            ForEach($fields.indices, id: \.self) { idx in
                TextField("placeholder", text: $fields[idx])
                    .focused($focusField, equals: idx)
                    .submitLabel(.next)
                    .onSubmit {
                        fields.insert("", at: idx + 1)
                        focusNextField(from: idx)
                    }
            }
        }

        .onAppear { /// Focus on initial field
            guard fields.count > 0 else { return }
            DispatchQueue.main.asyncAfter(deadline: .now() + 0.1) {
                focusField = 0
            }
        }

        private func focusNextField(from index: Int) {
            DispatchQueue.main.asyncAfter(deadline: .now() + 0.1) {
                focusField = index + 1
            }
        }
    }
}
```
